

CONTROLLING NJORD AIR  
PURIFIERS WIRELESSLY

# Njord Connect™

Operate, control and program Njord air purifiers wirelessly for optimised operation, servicing and maintenance.

*Benefits:*

- **Effective energy saving measures.**
- **Control all air purifiers individually or in groups.**
- **Easy to add more air purifiers if needed.**
- **Control and manage air purifiers from a mobile or tablet.**
- **24/7 system monitoring.**
- **Ensures the function of the air purifier.**

Njord Connect™ allows you to control your air purifiers wirelessly via Bluetooth or an internet connection. Njord Connect™ also monitors your air purification system, allowing you to predict potential stoppages and resolve issues before they arise. Drops in pressure are identified immediately, with the system indicating when it's time to change the filter.

The air purifiers are linked via robust, wireless mesh technology, allowing you to control all your air purifiers in groups or individually. This makes it much easier to set or change the

airflow and to program schedules using in-built clock functions such as timers, astronomical clocks and weekday clocks.

Significant energy savings can be achieved with the scheduling features by minimising the number of revolutions the air purifier motor performs to a minimum during those hours when there is no activity going on, such as overnight, before restoring the rev count to its original setting when the working day begins. For a company with single-shift production, this can save up to 5 kWh per air purifier, per day (based on Njord XP-2).

*Features:*

- **Continuous system monitoring for optimised performance and preventive problem management.**
- **Operate, control and program wirelessly via WiFi or Bluetooth.**
- **Robust, wireless mesh technology.**
- **Automatic controls and scheduling thanks to in-built clock functions such as timers, astronomical clocks and weekday clocks.**
- **Identifies drops in pressure and indicates when it's time to change the filter.**
- **Timer functions safeguarded in case of power outages.**

**Included as standard in all air purifiers:** Njord XP-S / Njord XP-2 / Njord XP-4

*Adapted for:*

**All types of business with one or more industrial air purifier from Njord Clean Air.**
